Who are we?

Our Background

365 Architechs Pty Ltd are a 100% Australian-owned business providing consultancy services to help organisations leverage digital information and technology solutions to drive profitability, growth and achievement of strategic objectives.

We employ a team of consultants with varying skills, experience and qualifications including certified practicing marketers, certified practicing accountants, chartered secretaries, database administrators, project managers, consultants and developers.

We recognise that we live in a digital world and seek to harness technology to deliver real world outcomes for the organisations we have the privilege to work together with.

Our Vision

We understand that business productivity is just not about software applications, it is a business competency that requires a strategic approach to fuel alignment of resources and achievement of organisational goals.

Our Values

Professionalism

A culture of integrity, courage and governance underpin the services and solutions we deliver to our clients.

Teamwork

We collaborate and partner with our clients to deliver innovative solutions that bring the most value.

Innovation

We work hard to stay on top of emerging technologies and defend against cyber threats for the benefit of our clients.

Diversity and Inclusion

We know that a team of unique individuals facilitates creative thinking and innovation, allowing us to deliver cutting edge results. Our team consists of individuals who come from various ethnic and religious backgrounds as well as individuals with disabilities and impairments.

What do we do?

Transformational Solutions

Our approach to crafting, delivering and utilising software to alleviate client challenges adapts to the ever-evolving technology landscape. A strong emphasis on configuration has emerged, instead of the development of entire systems.

We believe in aligning technology with organisational goals, the discipline of project management and the value of appropriate governance structures to ensure successful implementation of technology in all organisations, large or small, commercial or social enterprises.

Solutions are built using the Microsoft cloud toolkit to develop custom web and mobile applications, document management, cross-application workflows, live interactive dashboards, team collaboration workflows and enterprise business systems. We are deeply rooted within the world of artificial intelligence, robotic process automation and machine learning. This level of expertise means we can provide highly agile solutions that scale in the modern workplace.

Our Focus Areas

We specialise in the Microsoft Intelligent Cloud and related technologies, with a particular focus on Microsoft 365, Dynamics 365 and Azure, as the leading information management platform for organisations of all shapes and sizes.

Our focus areas consist of:

- The Modern Office
- The Dynamic Office
- The Secure Office
- The Intelligent Office

We believe that a long-term digital transformation strategy incorporates a balance of elements from each focus area, dependant on the organisation's needs.

Who do we help?

Our Key Sectors

We provide craft bespoke solutions to support three key sectors:

- Not-for-profit organisations including Peak Bodies and Charities
- Small to Medium Sized Businesses
- Professional Services

Not-for-profit organisations have been the subject of considerable disruption over the past decade.

With a backdrop of a new charities regulator, shifts away from block funding, for-profit competition, royal commissions, casualisation of the workforce, natural disasters and escalating demand for services, sustainable service delivery is increasingly a complex and uncertain undertaking for many for-purpose organisations today.

The sector has generally responded well to these challenges, building resilience and agility into their processes and models of care.

Technology has played its part, with many embarking on a digital transformation to engage with their clients, empower their teams, optimise their operations and continuously innovate their services.

We acknowledge the challenges this sector faces and have extended our expertise and solutions portfolio to best accommodate Not-for-profit organisations

365 Architechs are proud to have worked with so many of these organisations over the years, providing technology solutions to enable a single source of truth for client records, secure systems for storing confidential and sensitive information, protecting the rights of some of the most vulnerable people in our communities and bringing emerging technologies such as artificial intelligence, robotic process automation and predictive analytics to help improve outcomes for clients.

Our Philosophies

We share our expertise

We operate with transparency and integrity, meaning we don't withhold any information from our customers regarding the technology we use to provide services.

There is nothing that we won't share or require you to "get us to do for you". If you'd like to be able to do it yourself, we will explain how.

We actively promote capability building

We believe that assisting to build capability in your internal teams and improving their skills is imperative to maintaining the IT systems you utilise.

We encourage you to identify individuals with the availability, interest and capability for us to train and support as they develop their technical skills to allow you to provide an appropriate level of IT support internally.

We simplify technology

We disagree with the notion that technology is too complex to explain, and that you should blindly trust the advice of experts.

We will go out of our way to ensure you understand the decisions you are making about how technology can best be used for you.

Partner with us

We understand that business productivity is not just about software applications, it is a business competency that requires a strategic approach to fuel alignment of resources and achievement of organisational goals.

Our expertise in building resilient, engaged teams is powered by technology.

Our approach encompasses a strong commitment to privacy, transparency and reassurance.

Partnering with Microsoft means we have a steadfast relationship with the global leader in productivity and cloud systems.
