Spam Call Notifications Coming to Microsoft Teams

SECURE OFFICE

What is new?

A new feature is coming soon to Microsoft Teams to provide a more secure calling experience for users.

The spam call notification feature will automatically evaluate incoming calls and identify potential spam calls.

Identified calls will be labelled as “spam likely” and displayed as a spam warning notification in the call. Users can then choose to accept or reject the call.

All calls including identified “spam likely” calls will be displayed in the user’s call history in Microsoft Teams.

What are the benefits?

Spam call notifications will provide an additional layer of protection for users and their communication channels.

This feature could potentially enable organisations to develop a blacklist that prevents calls from suspicious numbers reaching employees.

What is Microsoft Teams?

Microsoft Teams is the digital teamwork hub for modern businesses, facilitating collaboration with workspace chat, audio and video conferencing, shared file storage and application integration. Teams is part of the Microsoft 365 family and is accessible via desktop, mobile and web devices.

Products: Microsoft Teams

Cloud Instance: Worldwide (Standard Multi-Tenant)

Release Phase: General Availability

Status: In Development

Release: August 2021
